# MASCOTT EQUIPMENT IS HERE TO ASSIST...

From design phase to specifications, quotation to repair services and continued integrity testing.

Mission critical fuel control systems are advanced fuel control packages with redundant safety features to eliminate single points of failure. These systems may use dual PLCs within a control panel with multiple power feeds and automatic transfer switches. Other system components include graphical user interface displays, level switches, leak detection and communication protocol methods.

Mission Critical fuel control systems are commonly employed in the following types of facilities:

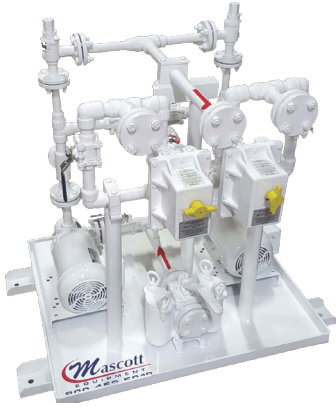

- Hospitals
- Data Centers
- Regional Emergency Coordination Centers
- Strategic Military Facilities
- Other locations where loss of life or significant financial loss may result from a failure of the generator fuel storage and transfer systems

Our product knowledge and our ability to assist with our customer's projects from design phase to installation has made Mascott Equipment Company the industry leader in the Northwest and beyond. Mascott Equipment Company is proud to provide our customers with the finest industry products, on-time testing and repair services.

# MISSION CRITICAL SERVICE

At Mascott Equipment we pride ourselves on superior customer service. We provide our customers with technical service and emergency response 24/7. As an authorized service outlet, we are on-call to support equipment needs for every product we sell as well as others brand names. We are cognizant of your investment and the importance of minimizing downtime to ensure your equipment will operate to its fullest design. Mascott is proud to provide our customers with the most up to date industry products, design services, start-up support, repair, replacement, and back-up inventory. Our service fleet is also stocked with an extensive parts inventory to maximize prompt and efficient response. We extend an invitation to our customers to learn more about our company and how we can better serve your Mission Critical needs.

You can rely on us.

- 24/7/365 Emergency Support
- Annual Line Leak Detection Testing
- Annual Sump Inspection and Cleaning
- Certified for SP001 EPA Fuel Tank & System Inspection
- Electrical Services
- EPA Compliance Inspection and Testing
- Equipment Installation Start-Up and Training
- Fabrication
- Field Meter Calibration
- Fungal and Algae Microbial Fuel Testing
- Leak Probe Testing
- Operation and Functionality Testing
- Pump Alignment
- Rust Prevention
- Mobile Fuel Polishing

### **DID YOU KNOW?**

Corrosive debris can get into the fuel causing contamination and damage.
